

# **PANSY Test Analysis**

**Juha Vierinen**

# Problem description

- Simple range-Doppler power spectrum analysis of multi-beam autodetected modes are needed to validate that the receiver works
- ST and M mode tests should be done

# ST mode

- Use the transmit pulse leakage as phase reference
- Use the detected sequence starts and analytic transmit pulse waveforms
- Simple matched filter analysis
- Hann-windowed averaged range-Doppler power spectrum estimate with 10 second averaging
- `pansy_detect.analyze_st_mode`

[illegible]

# ST mode

# M mode

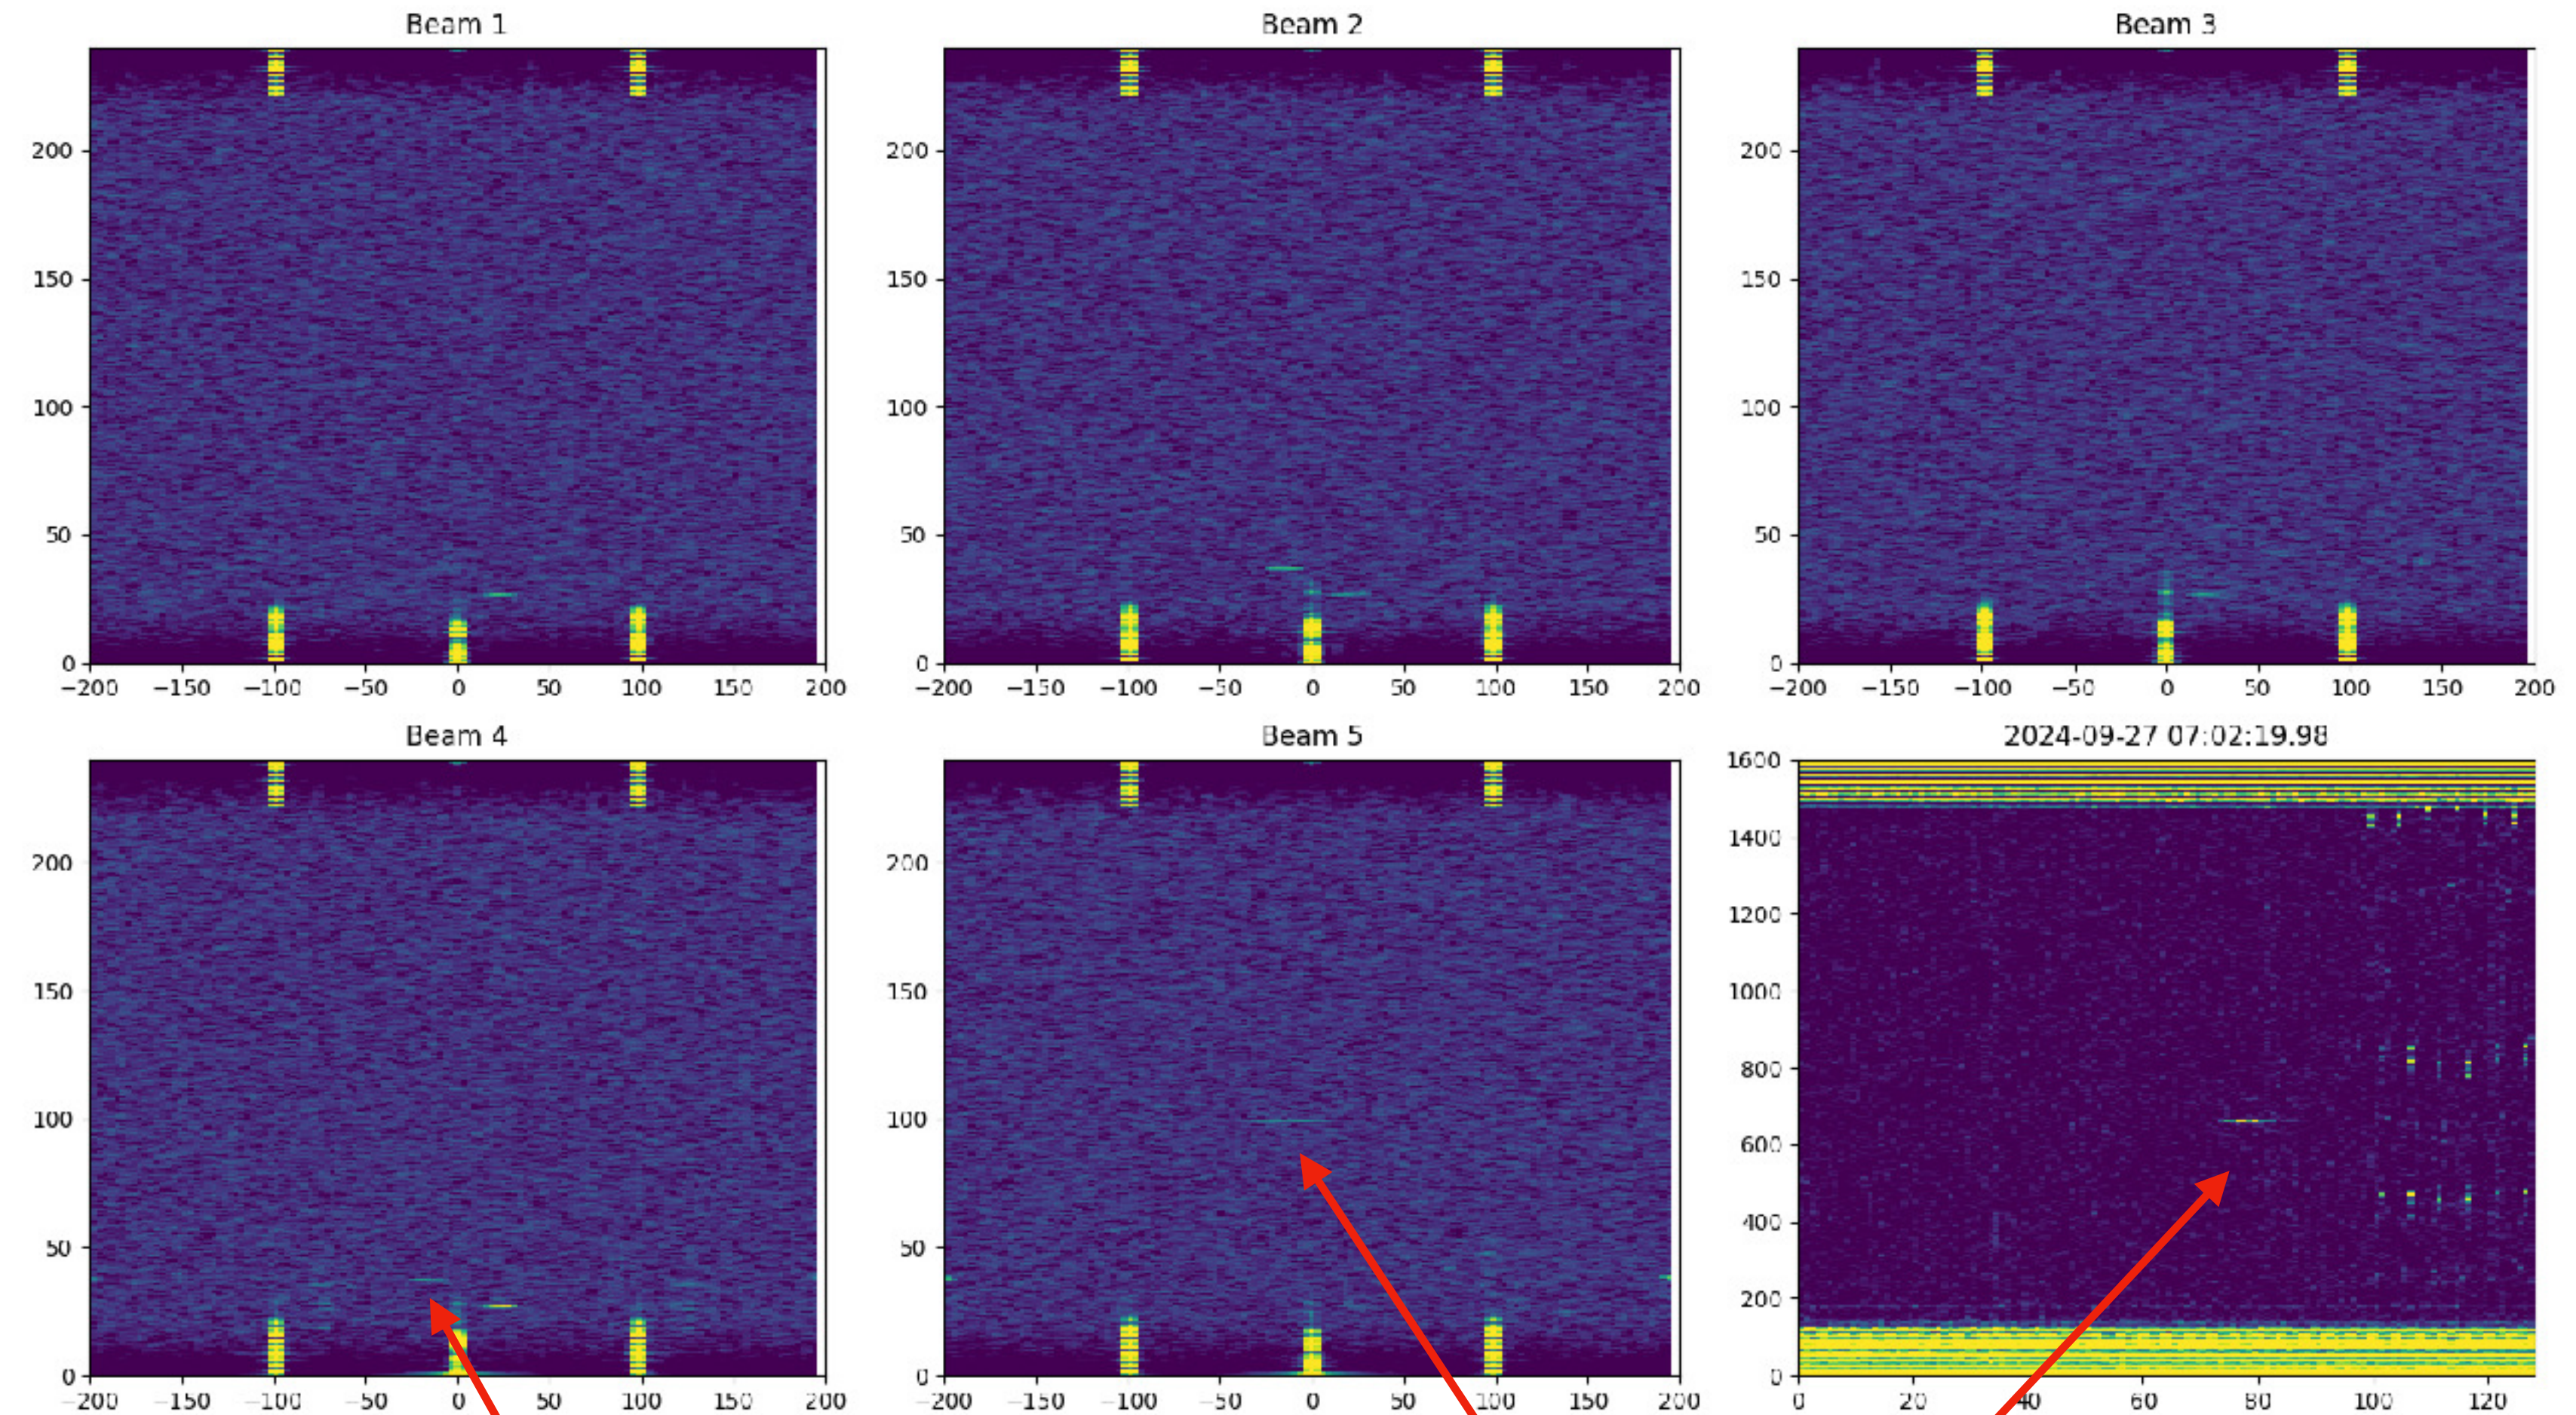

- Use the transmit pulse leakage as phase reference
- Use the detected sequence starts and analytic transmit pulse waveforms
- Simple matched filter analysis
- Hann-windowed averaged range-Doppler power spectrum estimate with 10 second averaging
- `pansy_detect.analyze_m_mode`

```
